Making IT Admins *Smile*

Your partner for future-proof *IT management*

Whether on-premises or in the cloud —
you stay in control at all times.

IT teams use baramundi software solutions to secure and manage digital work environments, ensure compliance, automate routine tasks, and free up time for strategic projects.

baramundi delivers:

Comprehensive, integrated, and scalable IT management solutions

A centralized, intuitive, and consistent interface for all tasks

Outstanding support, flexible training, and expert consulting from our in-house team and certified partners

Organizations worldwide choose baramundi to:

- ✓ Boost productivity and lower costs
- ✓ Accelerate ROI for IT investments
- ✓ Maximize network visibility
- ✓ Identify and close security gaps quickly
- ✓ Set and enforce consistent policies
- ✓ Ensure compliance and simplify audit reporting
- ✓ Proactively resolve endpoint performance and reliability problems

baramundi by the numbers:

4 million+
managed endpoints

ca. 6,000
customers worldwide

25+
years of experience

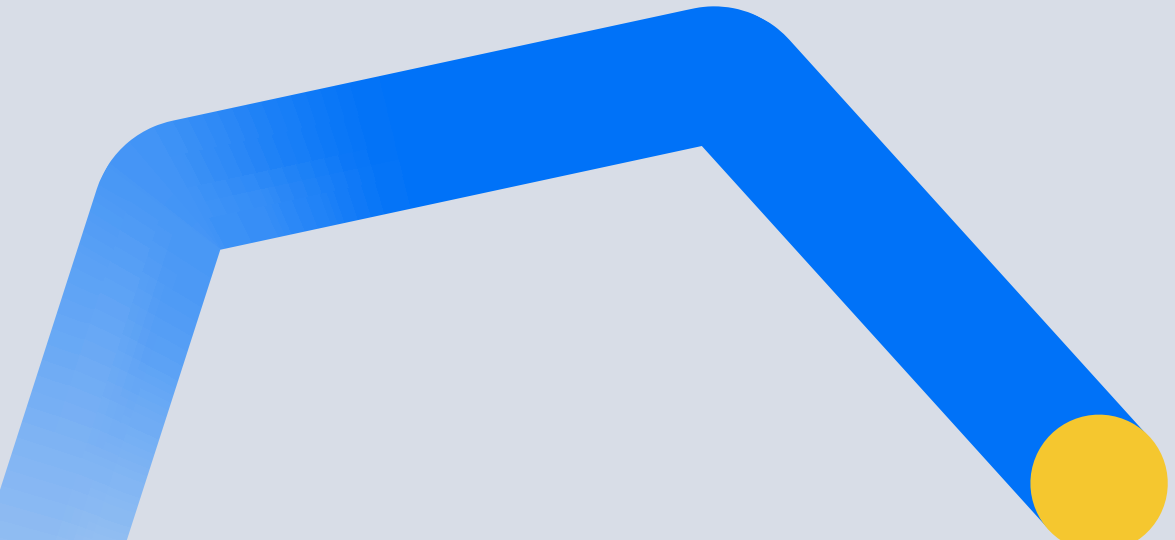

98%
Peak Net Promoter Score

100%
designed and developed in Europe

ISO 27001
certified and compliant with EU data protection standards

Trusted solutions for managing critical *IT infrastructure*

baramundi delivers, transparency, security, and resilience
without compromise

Finance / BFSI – Regulatory compliance, security, audit reporting

baramundi's real-time IT asset inventory, vulnerability scanning, and automated patch management solutions improve transparency and security while simplifying compliance audit reporting for NIS2 and other regulatory standards.

” When it comes to baramundi, I really can't think of anything to criticize. It's one of those software solutions that you don't have to worry about – it does what it's supposed to do. From my perspective, that's the highest praise and a clear recommendation.

Sebastian Stoff, IT Service Support,
Bank Gutmann AG

Healthcare – 24/7 operation, complex systems, patient data privacy

baramundi automation, tightly controlled maintenance windows, and remote access enable efficient device provisioning and management without interrupting clinical staff delivering patient care.

” The large number of medical devices with specialized software poses a particular challenge. Installations often require specific procedures for each device. We aimed to standardize maintenance tasks as much as possible despite this diversity and complexity. Our partner BAGHUS helped us achieve this by introducing the baramundi Management Suite.

Dr. Thomas Schmeidl, Head of IT,
Garmisch-Partenkirchen Hospital

State and Local Government – Compliance, heterogeneous IT, limited resources

baramundi automation and diverse device support enable centralized, granular, policy-based control of on-premises and remote endpoints while ensuring regulatory compliance.

” The baramundi Management Suite has provided us with tools that meet all of our needs. It fulfills all of our requirements for administration, inventory management, and modern endpoint management within our IT environment.

Manfred Buchhard, Senior Teacher,
Vocational School 1 Bebo-Wager-Schule

Manufacturing – Diverse devices, multiple locations, ISO/IEC compliance

baramundi on-premises operation, automated inventory, and vulnerability management, along with support for remote, mobile, Windows, and Linux devices, enable IT teams to securely manage office and production systems across locations while ensuring compliance.

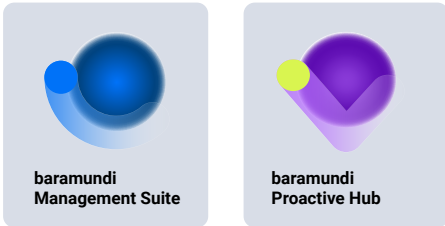

” The switch to baramundi led to significant improvements in our efficiency. Even though our IT team is the same size as before, the new options for automation, compliance, provisioning, inventory, and control have more than doubled our capacity to get things done.

Matteo Scala, Senior System Administrator,
EXOR International

Improving cybersecurity requires a *detailed, proactive approach*

Organizations worldwide need a detailed, proactive approach to protect IT systems from both common vulnerabilities and increasingly sophisticated cyberattacks.

The **baramundi Management Suite** and the **baramundi Proactive Hub** together provide an efficient and robust foundation for increasing network transparency, patching and updating software quickly, and enhancing your overall cybersecurity posture

IT security begins with the basics

baramundi solutions provide comprehensive network transparency, real-time awareness of endpoint security status, and rapid detection and remediation of open vulnerabilities:

Automated update and patch management
for operating systems and applications

Pre-packaged patches for third-party applications
reduce time-to-remediation

Encryption of sensitive data
and devices through centrally managed policies

Centralized local administrator passwords (LAPS) management
for secure IT access

Antivirus database monitoring
and updating from the baramundi interface

Automatic detection of security vulnerabilities and misconfigurations

Securing physical interfaces
to prevent unauthorized access

Proactive instead of reactive

Seamless automation and intelligent analytics help you identify risks early on — before they become problems. This transforms reactive cybersecurity measures into proactive defenses that continuously adapt to new threats.

” *It is crucial for my team to maintain very short patch cycles. Devices used by employees working from home must also be patchable during the day instead of at night, just as we do on our on-premises network. This requires strict policies for patch distribution and system restarts. That’s why we’ve been relying on baramundi’s patch management since 2016.*

Stephan Stummer, Head of IT Service Support, Bank Gutmann AG

What customers say about baramundi:

„Made in Europe“ Digital sovereignty with baramundi

Close integration with partners and suppliers, and the use of cloud-based services and data sources can provide companies with operational flexibility. But reliance on cloud infrastructure can also create IT dependencies that increase exposure to cybersecurity, compliance, business, and geopolitical risks.

baramundi solutions allow customers to preserve IT independence and digital sovereignty with:

Built-in compliance with stringent European data privacy and protection regulations

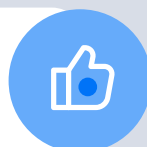

Use of on-premises or European cloud-hosted systems

Support for open source alternatives

ISO 27001-certified technology and service partners

Digital sovereignty means *freedom of choice*

The advantages of hybrid co-management with Intune

An example of the benefits of digital sovereignty is baramundi's support for hybrid co-management with Microsoft Intune. Microsoft Intune licenses are part of the Windows/Office license package at many companies. baramundi complements Intune's modern management capabilities with best-of-breed functionality that increases IT management flexibility and efficiency:

Business continuity

Combining cloud- and self-hosted management systems enhances security and ensures continued operation during Internet outages.

Heterogeneous environment

Hybrid management supports a wider range of endpoints, including devices not connected to the Internet, as well as legacy Windows and Linux systems, and routine maintenance tasks.

Data sovereignty

Securing sensitive data on-premises helps improve security while maintaining the advantages of cloud-based management.

baramundi met our requirements most convincingly. The solution enables us to manage endpoints centrally, efficiently, and completely on-premises, even without internet access. For us, baramundi is a partner that consistently supports our requirements for control, resilience, and digital sovereignty.

Philippe Bähler, Head of IT at
Regionalwerke AG Baden

baramundi's co-management strategy helps your organization minimize risks, support compliance, improve long-term competitiveness, and maintain business continuity during disruptions to Internet services.

baramundi Management Suite

Intuitive, secure, powerful

Streamline infrastructure management with a centralized unified endpoint management platform that automates provisioning and maintenance tasks across all endpoints, increases network visibility, improves device reliability and performance, and boosts IT team efficiency.

What the baramundi Management Suite offers

- Inventory & Network Discovery
- OS-Deployment & Configuration
- Software Deployment and IT Automation
- Mobile Device Management
- Patch Management
- Endpoint Security
- Remote Access
- Vulnerability Scanning
- Managed Software (3rd-party app patch management)
- Integration with third-party systems

**baramundi
Management Suite**

”

It's great what we've been able to achieve with the software so far. By combining baramundi Mobile Device Management with classic client management, we now have a truly comprehensive unified endpoint management solution. And we're still a long way from exploring all the possibilities this powerful tool offers. The training on how to use the software was crystal clear, and the trainers were well-prepared and knew their product inside out. All in all, we are very satisfied with baramundi.

All-in-One Solution

The **baramundi Management Suite** integrates endpoint management functions within an intuitive interface, enabling you to complete tasks quickly and easily across Windows, Linux, macOS, iOS, and Android devices.

Andrea Ruscitti, Information and Communication Officer at Servizi Italia

baramundi Proactive Hub

Intelligent, automated, and scalable

Smart IT Management for Lean IT Teams:
The baramundi Proactive Hub is a cloud-based platform for modern proactive endpoint operations. It helps IT teams detect issues early, prioritize risks, and make IT operations more efficient.

**baramundi
Proactive Hub**

Insights

Transparency across every endpoint

Complete capture and intelligent consolidation of:

Performance indicators

- Technical performance indicators (e.g., boot times, network latency, OS and app crashes)
- End user feedback

Security indicators (available late 2026)

- Vulnerability detection
- Vulnerability analysis

Guidance

Trusted, context-aware recommendations

Intelligent recommendations offering:

- **Actions with the greatest benefits**
- **Rapid identification of system anomalies**

Action

Immediate remediation

Fast and secure remediation

- **Improved endpoint stability**
- **Reduced manual effort**
- **Performance-focused software/OS updates**

”

In the past, we had to perform complex analyses and evaluations of logs to identify the causes of problems. Now, thanks to the clear dashboard, we can detect the first signs of anomalies before failures occur. This saves time and reduces stress when you can fix issues before they disrupt other users or departments.

Matthias Nguyen , IT Administrator, Schnaithmann Maschinenbau GmbH

Proactive Endpoint Operations *by baramundi*

Modern IT teams face a growing challenge: The number of endpoints, applications, and security requirements is constantly increasing, while time, staff, and specialized knowledge rarely scale accordingly. The result is a workday dominated by tickets, alerts, and unplanned outages.

Data chaos turns into clarity. Clarity leads to action.

Proactive Endpoint Operations has a simple goal: to identify and resolve issues before they impact employees, business processes, or security.

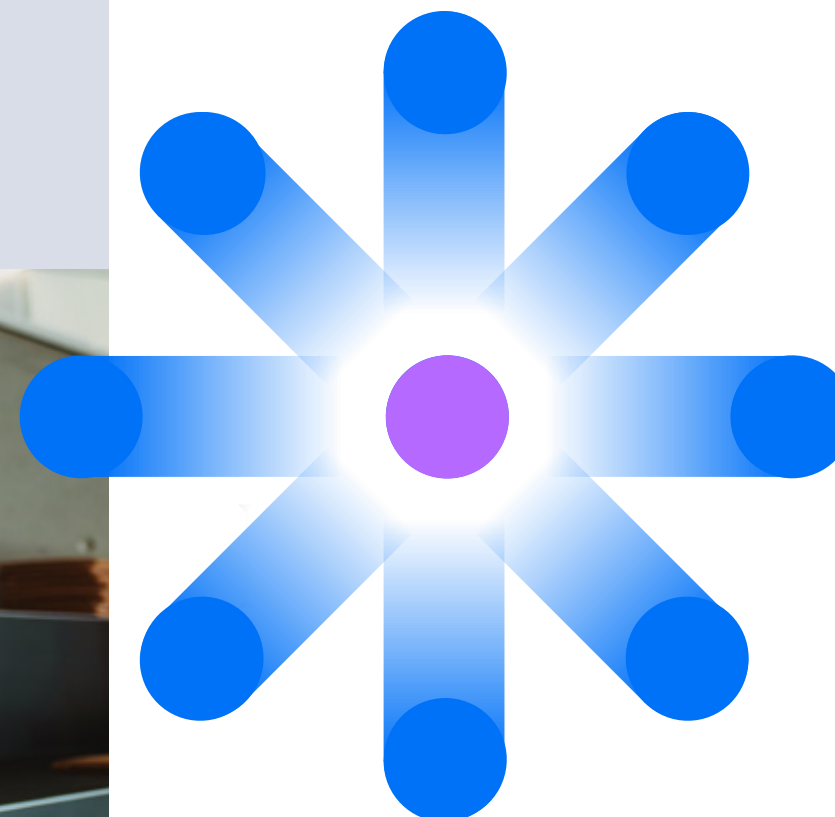

What matters most is not the volume of available data, but the ability to derive the right priorities from it.

Our Proactive Endpoint Operations approach supports IT teams with:

- ✓ **Contextualized analyses**
of security, endpoint analytics, and digital employee experience
- ✓ **AI-powered anomaly detection**
for early problem detection
- ✓ **Prioritization of relevant endpoint issues**
based on risk and impact
- ✓ **Fast and effective remediation**

” With baramundi, we were finally able to understand which apps were crashing for users and how our end devices were performing in practice. But my personal favorite is the network check, which makes it very easy to identify the causes of unstable connections.

Lasse Böger, IT Administrator,
Stadtwerke Böhmetal GmbH

From Data to Action

Proactive Endpoint Operations reveals what has often remained hidden until now. Instead of looking at isolated data points, information about performance, stability, security, and user experience is placed into a shared context. This enables IT teams to make informed decisions faster, allocate existing resources more effectively, and fill any gaps in specialized knowledge with integrated recommendations and best practices.

More than just software Training, service, and consulting

We support customers from their free system trial, through initial deployment and configuration, to the ongoing operation of their baramundi solutions. We also offer additional training on topics important to your IT team.

Consulting

- Implementation workshops customized for your environment
- Consulting services as needed – remotely or on site.
- On-site training provided directly on your infrastructure.

Academy

- Virtual and on-site training at baramundi.
- Topics including security, automation, and efficient operation.
- Directly related to your everyday administrative tasks.

Services & Community

- User Forum with an active and supportive customer community.
- Online Knowledge base and help center with instructions and best practices.
- Feedback portal where users actively contribute to development of our solutions.

Added value: Tailor-made solutions instead of off-the-shelf software.

” *Feedback portal where users actively contribute to development of our solutions.*

Phillip Müller, Head of IT, University Hospital
Düsseldorf Medical Services GmbH

The baramundi partner world **Growing and succeeding together**

We enjoy working with experienced system houses, dedicated specialists, and carefully selected partners who want to make a difference together. Our different partner levels allow us to customize our collaboration to your individual needs and requirements. Together, we combine expertise and know-how for continuous growth, innovative solutions, and customer satisfaction.

Platforms and technology solutions *– Together with strong partners and brands*

Experience shows that new software needs to blend into current systems and be easily scalable when required.

Our powerful solutions enable smooth integration with a wide range of products via open interfaces. With our versatile baramundi Connect API and third-party connections, baramundi is your ideal partner for bringing together what belongs together.

The [first baramundi] meetings were friendly and very open, and we didn't just beat around the bush, but immediately came up with concrete action items that were then implemented.

**Dorian Garbe, Managing Director,
SOFTTAILOR GmbH**
